## Using Comodo Personal Firewall to block external connections to DC++

Comodo is a bit tricky to configure properly, as it had a nasty habit of removing old firewall rules when adding new ones. So you may need to repeat some of these steps if you find it is being a pain.

1. First close DC++. Configuring the rules with it open may mean they get over written when you do next close it.

2. Open the main Comodo window and find your way to the Application Monitor Section (via Security at the top). Scroll down to any existing DC++ rules and remove them. You will be writing your own and those will just have the default settings. Remove any existing DC++ Rules.

3. Next click Add at the top to start adding new rules. In the Application/Program Path box, put in the path to your DCPlusPlus.exe (usually found in C:\Program Files\DC++) and tick the box for 'Skip Parent check'. You will have to do this for each of the DC++ rules you create.

– Application / Parent Application ————————————————————————————————————							
DCPlusPlus.exe	Browse						
C Learn the parent	C Specify a parent						
	ent Application DCPlusPlus.exe C Learn the parent						

4. In the lower section, make sure that Allow is set for the action, TCP or UDP for the Protocol and In/Out for the Direction.

C Allow all activities for this application								
<ul> <li>O Apply the following the follo</li></ul>	owing criteria							
General								
	Destination IP	Destination Port	Miscellaneous					
Action :	Allow							
Protocol :	TCP or UDP 💌							
Direction :	In/Out							

5. Next go to the "Destination IP" tab. Make sure 'Apply the following criteria' is selected, and tick the box for Single IP and enter 127.0.0.1 as the IP

Application Control Rule
COMODO   Firewall Pro Application Control Rule
Application / Parent Application
C:\Program Files\DC++\DCPlusPlus.exe Browse
Skip parent check C Learn the parent C Specify a parent
C Allow all activities for this application
Apply the following criteria
General Destination IP Destination Port Miscellaneous
Exclude (i.e NOT the choice below)
C Any IP: 127.0.0.1
O Single IP
O IP Range
O IP Mask
C Zone
C Host Name
OK Cancel Help

6. Click Add again to start adding another rule. Again set the DCplusPlus.exe in program Files as the application Path. Allow, TCP or UDP and In/Out as the General options, and go to the Destination IP tab.

This time, select IP range as the option. Put 137.205.0.0 as the first IP and 137.205.140.0 as the last IP.
